

## Is Your Car Making Your Allergies Worse?

The air is filled with pollen, dust and pollutants that are drawn inside vehicles through air conditioning and ventilation systems.

Your vehicle's **Cabin Filter** is there to clean the air coming into your vehicle, remove allergens, and should be replaced regularly, to help you and your passengers stay more comfortable!

*"A dirty or clogged cabin air filter can cause contaminants to become so concentrated in the cabin that **passengers actually breathe in more fumes and particles when riding in the car than when walking down the street,**" said **Rich White**, executive director, Car Care Council. "With allergy season here, **replacing the cabin air filter** is a simple way for you and your passengers to **breathe easier while driving.**"*

**Cabin filters** should NOT be cleaned and reinstalled. Instead, they should be replaced every 12,000 to 15,000 miles, or per the owner's manual.

Our automotive service technicians can help locate the cabin filter, check it and replace it according to the vehicle's owner manual.

We'll inspect your **Cabin Filter** at NO charge (on most models it takes about 10 minutes to check) and replace it IF needed!
